

ABOUT OUR CLIENT

Our client is a global company that is strategically focused on a player-first style of innovation and development. Their roots are firmly planted in the Class II Native American gaming market. Their customer-centric culture and growth have helped them to branch to become a leading all-inclusive commercial gaming supplier. Powered by high-performing Class II and Class III slot products, an expansive table products portfolio, real-money gaming platforms and content, highly rated social casino solutions for operators and players, and the best-in-class service, they offer an unmatched value proposition for their casino partners.

THE CHALLENGE

As our client grew both their geographical footprint and their product offerings, the ability to quantify their cyber risk across all areas of the business became more difficult. Additionally, each division of the business was taking ownership of their individual security: this resulted in toolset and vendor services redundancy and unnecessary costs for the business. They engaged Maxxsure to help them implement a Cyber Risk Management Program and to create an enterprise-wide security standard both in practice and toolset.

CASE STUDY GAMING SOLUTIONS for CASINOS

THE RESULTS

Engaging Maxxsure has provided the entire client team with a common language in which technical and non-technical leadership can communicate about addressing cyber risk in a financially and operationally viable manner. Non-technical team members have insight into the justifications behind investments in budget and resource allocations toward specific measures implemented by security teams, and create a deeper understanding of how these measures protect the company's assets.

THE SOLUTION

Our client adopted the Maxxsure M-Score™ solution in 2021 to better manage their cyber security spend and set a global standard for security practices. They leveraged the workload-level reporting to concentrate their security efforts to the most financially impactful areas of their organization. With their initial M-Score cyber risk rating, they identified a gap in the monitoring of their network enterprise-wide. With this revaluation, they have now implemented an industry leading MDR capability.

ABOUT MAXXSURE

Maxxsure offers the most comprehensive cyber risk quantification solution that establishes the foundation by which organizations can make data-driven and financially-vetted decisions regarding how much cyber risk to remediate, retain, or transfer via an insurance policy adoption.

Maxxsure collects data from your organization and trusted third party resources, uses a robust model to compute your cyber risk - your M-Score - and communicates the factors that influence your score. We enable continuous monitoring and provide the most precise estimates of financial loss potential. This reporting equips your team to prioritize cyber initiatives to address your situation as it evolves.
